PROJECT TITLE: Understanding the Effectiveness of Non-Chloride Liquid Agricultural By-Products and Solid Complex Chloride/Mineral Products Used in Snow and Ice Control Operations

OBJECTIVES: • Determine and document the effectiveness and impacts of non-chloride liquid agricultural by-products and solid complex chloride/mineral products used in snow and ice control operations; and
• Unravel the mechanisms (if any) by which these products contribute to anti-icing, deicing, corrosion inhibition, etc.

PERIOD COVERED:
April 1, 2015 – June 30, 2015

PARTICIPATING AGENCIES:
Western Transportation Institute, Montana State University – Prime
Monte Vista Associates LLC, Arizona - Subcontractor
MLT Group LLC, Minnesota - Subcontractor

PROJECT MANAGER: Tom Peters
LEAD AGENCY: Mn/DOT
PRINCIPAL INVESTIGATOR: Laura Fay

SP&R PROJECT NO: TPF-5(218)
Contract#99006

PROJECT IS: Planning
X Research & Development

ANNUAL BUDGET: $191,238
PROJECT EXPENDITURES TO DATE: $162,882.75

WORK COMPLETED:

Project Management
We worked with the project panel and the subcontractor the MLT group to modify the contract to allow for additional footage to be captured for use in Task 7.

Task 1. Literature Review (100% completed)
The draft literature review was submitted and some minor comments were received from the panel. These comments (along with more recent literature) have been addressed and will be incorporated into the Task 5 manual and Task 6 final report.

Task 2. Identify Products (100% completed)
The team has identified the 10 products commonly for further investigation.

Task 3. Survey (100% completed)
The team surveyed experts at state and local agencies to gather their experience with the use and performance of such alternative deicing products. After approval by the Clear Roads panel, the survey questionnaire was distributed to the Clear Roads member State DOTs and APWA Subcommittee on Winter Maintenance. A total of 31 responses were received from 16 different states. The survey results have been summarized.

Task 4. Laboratory Testing (100% completed)
The laboratory testing has been completed for ten selected products, and deicer mechanism testing for the four selected products. The laboratory testing results have been summarized.

Task 5. Development of a Best Practices Manual (95% completed)
Based on findings from Task, 1, 3, and 4, the Best Practices Manual was developed and submitted to the Project Panel on July 17, 2015.

Task 6. Final Report and Presentation (50% completed)
Content for the final report has been developed for the tasks completed. This task will be the primary focus in the next quarter.

Task 7. Video (50% completed)
The MLT Group has conducted one onsite video shoot to capture ag-based products being applied and stored by maintenance agencies. The MLT Group has worked to coordinate a second video shoot. WTI has captured video of the laboratory testing and sent it to the MLT Group for editing. Efforts on this task will continue into the next quarter.

<tr>
<th>SUMMARY OF ACTIVITIES EXPECTED TO BE PERFORMED NEXT QUARTER:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Efforts in the next quarter will likely include a meeting to discuss the findings and content of the Task 5 Best Practices Manual deliverable and address any comments from the project panel. Work in the coming quarter will focus on the Task 6 Final Report and Presentation, and working with the subcontractor the MLT group in the development of the Task 7 Video.</td>
